Uncovering Periodic Paralysis

Genetic testing to shorten the diagnostic journey

Patients should speak with their healthcare providers to request a genetic test for periodic paralysis.

No-cost Periodic Paralysis gene panel testing program

Strongbridge Biopharma™ has partnered with Invitae to offer a Periodic Paralysis gene panel test for those who have episodic muscle weakness or temporary paralysis provoked by common triggers for primary hyperkalemic or hypokalemic periodic paralysis.

A Periodic Paralysis gene panel test can bring you closer to uncovering the genetic cause behind the attacks of paralysis and muscle weakness caused by hyperkalemic or hypokalemic periodic paralysis. It can help shorten the diagnostic journey and expedite management of the disease.
The Invitae Periodic Paralysis Panel includes analysis for both hyperkalemic and hypokalemic periodic paralysis.

- Testing with the Invitae Periodic Paralysis Panel includes analysis of the following three most common associated genes: **SCN4A, CACNA1S, and KCNJ2**
- Turnaround time for the panel is rapid: Once Invitae receives the sample, your doctor will receive results within 10 to 21 calendar days (14 days on average).
- Invitae’s board-certified genetic counselors are available on-demand Monday through Friday, 5 am to 5 pm Pacific Time.

**Family Variant Testing**

- Strongbridge Biopharma and Invitae offer no-cost family variant testing to any first-degree relative of a patient newly diagnosed through the *Uncovering Periodic Paralysis* genetic testing program.

**Program Eligibility**

- 18+ years of age
- Episodic muscle weakness/paralysis attacks or episodic pain after attacks (more than one occurrence)
- Episodes are provoked by at least one of the common triggers for hyperkalemic or hypokalemic primary periodic paralysis

Although genetic testing can help confirm a suspected diagnosis, the absence of a genetic alteration does not preclude diagnosis.

**Resources Offered:**

1. Kits for either blood or saliva sample collection
2. Blood draw services at no additional cost within the US
3. Ability to schedule a blood draw appointment at a physician's office or at a patient's home

**About Primary Periodic Paralysis (PPP)**

- Primary Periodic Paralysis is very rare, affecting ~4,000 to 5,000 diagnosed individuals in the US.
- This condition causes attacks that affect your muscles, resulting in extreme weakness or temporary paralysis—most often the inability to move the muscles of the arms and legs.
- The most common forms are hyperkalemic and hypokalemic periodic paralysis; however, other forms exist.
- Primary Periodic Paralysis is usually inherited from a parent and may affect multiple people within a family.
